SECUROS XPRESS

Cost Efficient Video Surveillance Management and Recording

ISS
INTELLIGENT SECURITY SYSTEMS

By providing a one-stop shop for an extremely comprehensive array of security needs, Intelligent Security Systems (ISS) delivers both convenience and cost efficiency for its customers.

With ISS roots in space technology, the video analytic algorithms provide a level of intelligence and pinpoint accuracy that was previously only available for military and law enforcement applications. The true open architecture of ISS software allows it to work with any system, whether analog or IP, providing inherent scalability and flexibility for an endless series of real world applications.

With ISS, even advanced image analytic capabilities (such as license plate recognition, face recognition, container number recognition) are built into the software and can be activated at any time. In this way, customers are spared the typically expensive and time consuming efforts of migrating to new software, or integrating 3rd party analytics (with unknown consequences to the stability of the system) when the demands for features change. SecurOS Enterprise solutions can be created from a former SecurOS Express or SecurOS Professional, with seamless upgrading of more cameras, servers and analytics. This guarantees a maximum in flexibility and one-time investments.

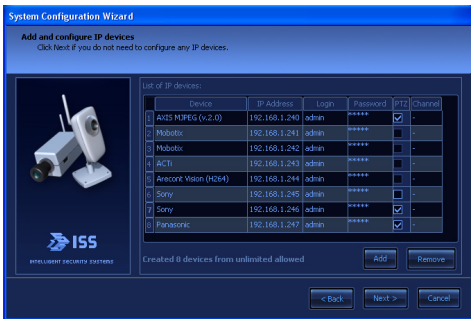
Product Overview

SecurOS Xpress is an ideal solution for video recording and management in small to midsize security deployments, and brings the surveillance system into the network. The advanced features of SecurOS Professional and SecurOS Enterprise are now available for smaller installations. SecurOS Xpress shares the same core system and graphical user interface with those two solutions, and can easily be upgraded to either one for future expansions.

Standard View with PTZ Control *for IP and Analog Cameras.*

SecurOS Xpress supports analog and IP cameras, utilizing megapixel cameras in their native resolution. The optional ISS video capture board guarantees immediate connection to existing analog cameras when needed. This makes SecurOS Xpress perfect for the migration from analog to IP for smaller projects, in the most cost efficient way.

Powerful reporting tools create direct incident information per SMS or e-mail. System access per mobile devices connects you to the cameras from anywhere. The VCR type controls (rewind, fast forward, pause, etc.) ensure ease of use. The configuration has been simplified with a step by step wizard based setup.



Wizard Configuration *for seamless setup.*

While SecurOS Xpress covers a wide array of security needs, it can easily be built out as necessary. More functions and enhanced analytics are available with a seamless upgrade to SecurOS Professional or SecurOS Enterprise.

SecurOS XPRESS

Functionalities

- Multi-Channel Video Recording
- Analog and IP Camera Capability
- Up to 16 Real-Time Channels (480fps)
- Up to 16 Audio Channels
- CIF1, CIF2, CIF4, VGA and Multi-Megapixel resolution
- Active Deinterlacing for CIF4 Analog Cameras
- PTZ & Digital (Megapixel) PTZ Controls
- Digital Zoom
- Pre and Post Alarm Recording
- Event Bookmarking for Fast Post Event Review
- Variable Compression and Quality Settings
- Watchdog capability
- Audio and Video Synchronization
- Motion-Based Video Recording and Search Functions
- Motion Masking Capability
- Event Response by SMS, E-mail, Telephone
- Multi-Monitor Support
- Voice Notification
- Time Schedule Engine
- Triplex Operation: Simultaneous Playback/Record/View
- Web Browser Support
- PDA and Smart Phone Support
- Macro Engine Support
- Export as JPEG, AVI, Screenshot or Native (Encrypted) Format
- Optional I/O Board for Dry Contact Hardware Integration
- User Rights Management
